

In the present economic climate, consider refurbishment instead of buying new.

Replacing a refrigerated vehicle is a big financial commitment, and as we head deeper into recession you are perhaps concerned that 'commitment' may turn to 'burden'.

Consider refurbish instead of replace.

A number of vehicles are replaced when for a considerably smaller cost, their working lives could be extended by one or two years, possibly even longer.

Karikool offer a complete refurbishment service for the load area of your refrigerated van. Repairs to damaged areas. Re-gel coating to get back that nice new look, and easy clean hygienic finish. Non-slip floors can be re-gritted. Door panels replaced. Refrigeration equipment fully serviced.

Whether you have holes punched in the side panels, the floor worn through to the ply or the GRP de-laminating. All these unsightly and unhygienic problems that give a poor impression to your customers can be solved. At the same time we can service or recondition your refrigeration equipment.

We can also arrange for your vehicle to be serviced and for any necessary mechanical repairs to be completed whilst the vehicle is with us.

For more information on this service please use our contact page or ring Alan or Shane on 01371 851606
